- (c) ① $h(x, y)$ acts as horizontal gradient operator
- ② $h(x, y)$ computes the weighted difference between the pixels on the left and right of each position
- ③ $h(x, y)$ effectively detect vertical edge in the image

Verification

- ① Along the left edge of the rectangle in $f(x, y)$, where there is a transition from 0 to 1
- ② Along the right edge of the rectangle in $f(x, y)$, where there is a transition from 1 to -1
- ③ This behavior confirms that the filter effectively detects vertical edges
